

Blaze

ALERT

1.

Dispatch broadcasts the alert with a description and image

2.

Data is taken from RMS, scanners, emails, and/or external databases

3.

Field officers receive alerts on mobile data terminals and handhelds

4.

BLAZE Alert console is integrated with existing user interfaces

Notify officers with critical data where and when it matters most.

DropFire Inc.'s BLAZE™ Alert system augments existing CAD applications with the capability of wirelessly transmitting image-rich digital BOLOs to all mobile devices. BLAZE™ Alert integrates with existing interfaces making it extremely user friendly and cost effective. Armed with BLAZE™ Alert, law enforcement agencies are able to improve success rates of apprehending wanted criminals and rescuing missing persons.

Client Testimonial

“ We received word that an armed male had kidnapped a woman at gun point. Using DropFire’s BLAZE™ system we pulled a picture of the suspect from our mug shot database and broadcast it to all cruiser MDTs and PDAs. The alert resulted in the fast apprehension of the kidnapper and the live rescue of the victim.”

Craig Withycombe, *Management Information Systems*
Lowell Police Department
